

# Complete Repertory 2020

## Work Done

**2019** was an unusual year in that a lot of time was dedicated to making the working database-management program multi-user based. 2018 we started with this, but the main work was done the year after i.e. in 2019. In the future multiple editors can work on the data in Complete Repertory.

Other than this much work has again been done homeopathically.

Dr. Rajesh Rajendran continued with his work of adding more contemporary material into the Complete Repertory. The emphasis was most on those material that have had a known toxicological effect on interaction accidentally by poisoning or through exposure and contamination. Next to adding more material from some sources that were already semi-added he worked on the new material below. A special mentioning of the proving of *Triticum vulgare* by P. Friedrich, much demanded due to its relation to gluten-intolerance, or perhaps due to its relation to glyphosate-based herbicides (Roger van Zandvoort's comment).
